Thanks Dennis!

Hopefully we'll have an executed subcontract by mid-week, then we'll prepare the waste profile. The vendor will prepare it, I'll review it, then I'll send it to you and Melissa for signature. After I receive the signed profile (scanned copy is fine), we'll have Capital prepare the manifest.

We will need your or Melissa's signature on the manifest. If neither of you can be in Elkview the day of the pickup to sign it (date TBD), then we can arrange to have it mailed to you for signature and I can meet the transporter the day the drum is picked up.

Subject: IDW Subcontract for WV Chemical Leak

Dennis,

Attached is the bidder list and quotes we received for disposal of the IDW drum for WV Chemical. The low bidder was Capitol Environmental at \$435. That was higher than I thought it would be. Disposal cost for IDW soil is usually much cheaper, but it can be used as landfill cover. The fact that we only have one drum also makes the per drum disposal cost higher due to transportation costs to pick up a single drum. The high bidder said his company would not landfill it due to the media hype and would only dispose of it by incineration. I think the publicity surrounding the spill also drove up the cost of the other vendors.

Unless you have any issues or want me to try to find another source to solicit a bid, I will have a subcontract executed and will begin working on the waste profile.
